

Environmental policy

ABB Australia includes environmental protection within its top priorities. We address environmental issues in all our operations.

The organisation has adopted ISO 14001 as an environmental management system standard. We are committed to legal compliance, including other requirements to which ABB subscribes, covering pollution prevention and minimisation of our operation's impact on environment through continuous improvement.

Guided by the ABB Group's corporate policies, ABB Australia strives to meet or surpass our environmental obligations and objectives demonstrated by our commitment to the following actions:

- To increasingly encourage suppliers and subcontractors to adopt international environmental standards.
- To participate in the development and marketing of resource efficient products and systems as well as facilitating the use of renewable energy resources.
- To reduce the environmental impacts of our products and services, conserving resources and delivering products that are safe to use and can be re-used, recycled or disposed of safely.
- To include environmental aspects in the risk assessment of major customer projects.
- To increase focus on actual environmental performance as part of our audits, including mergers, acquisitions and divestments.
- To encourage environmental awareness amongst our customers and stakeholders.
- To educate, train and motivate our employees to carry out their tasks in an environmentally responsible manner.
